

## 2025.02.24: Implementation of Read-Only System Files in RutOS 7.14

With the release of RutOS version 7.14 in Q2 2025, in RUTX12 devices will implement read-only permissions for critical system files by default. The new read-only configuration ensures a more secure and stable environment, though it may affect those who perform non-standard operations.

PCN Number: PCN\_read\_only\_system\_RUTX12\_2025\_02\_24

| Change type          | RutOS System Integrity Enhancement                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Detailed description | With the release of RutOS version 7.14, the device's critical system files will become read-only by default. This prevents unauthorized or accidental modifications that could damage the system's integrity. Standard users operating within typical parameters should not be affected, while those who rely on direct file alterations will need to adjust their workflows. Custom firmware options are expected to allow reverting to a more flexible configuration if required. |
| Change reasons       | To maintain system integrity, enhance reliability, and prevent unintended damage to core files.                                                                                                                                                                                                                                                                                                                                                                                     |
