Summary

Internet status is a feature, also known as 'connchecker' which monitors the connectivity status of specified IPv4, IPv6, and DNS addresses. Repeatedly checks the connectivity status at specified intervals and reports changes. **Note:** Internet status is additional software that can be installed from the **System** → [Package Manager](#) page.

If you're having trouble finding this page or some of the parameters described here on your device's WebUI, you should **turn on "Advanced WebUI" mode**. You can do that by clicking the "Advanced" button, located at the top of the WebUI.

Status

| Field | Value | Description |
|-------------|-------------------------------------|--|
| IPv4 status | Online Offline Untracked | <ul style="list-style-type: none">• Online - address is reachable.• Offline - address is unreachable.• Untracked - address not provided in the configuration or tracking is disabled. |
| IPv6 status | Online Offline Untracked | <ul style="list-style-type: none">• Online - address is reachable.• Offline - address is unreachable.• Untracked - address not provided in the configuration or tracking is disabled. |
| DNS status | Available Unavailable Untracked | <ul style="list-style-type: none">• Available - DNS is reachable.• Unavailable - DNS is unreachable.• Untracked - DNS not provided in the configuration or tracking is disabled. |

Configuration

| Field | Value | Description |
|--------------|--|--|
| Enable | off on; default: on | Enable internet monitoring. |
| Track IPv4 | ipv4; default: 1.1.1.1 | IPv4 address to be monitored. |
| Track IPv6 | ipv6; default: 2a00:1450:4001:831::200e | IPv6 address to be monitored. |
| Track domain | domain name; default: dns.google.com | Domain to be checked if alive. |
| Interval | seconds; default: 60 | The time interval in seconds at which the connectivity status should be checked. |
