Summary

RUT230 units are used for WiFi connectivity in modern IoT pest control devices.

Customer profile

Samura is a Czech that sells pest control equipment.

Challenge

Providing an Internet connection for the traps, thus making them manageable via a smart-phone app.

Solution & Benefits

The pest control solutions do not require high data transfer speeds, making 3G a viable option to provide connectivity to the traps, which is what the RUT230 is built for. Easy to install anywhere because of its compact size and easy to set up thanks to a simple, user friendly interface, it is also capable of providing SMS services, which are used as another method of monitoring the traps.
