Summary

Simple Network Management Protocol (SNMP) is a popular protocol for network management. It is used for collecting information from, and configuring, network devices.

This manual page provides an overview of the SNMP function in RUT955 devices.

SNMP is additional software that can be installed from the **System → Package Manager** page.

MIB file downloads

FIELD ROUTER	MIB FILE
RUT2XX	**TLT-MIB_RUT2XX**
RUT9XX	**TLT-MIB_RUT9XX**

SNMP Configuration

Field	Value	Description
MIB file	- (interactive button)	Downloads the MIB file for this device.

Enable SNMP service	yes | no; default: **no**	Turns SNMP on or off.
Enable remote access	yes | no; default: **no**	Opens a port (set in the field below) in the Firewall settings so that the SNMP service may be reached remotely from WAN.
Port	integer [0..65535]; default: **161**	SNMP service port.
Community	Public | Private | Custom; default: **Public**	SNMP Community is an ID that allows access to a router's SNMP data.
Location	string; default: **Location**	SysLocation object. Arbitrary SNMP variable that represents a custom location.
Contact	string; default: **email@example.com**	SysContact object. Arbitrary SNMP variable that represents a contact Name.
Name	string; default: **Name**	SysName object. Arbitrary SNMP variable that represents the system's Name.
SNMP version	v1/v2 | v1/v2/v3 | v3; default: **v1/v2**	Specifies which SNMP version is to be used.

Trap Settings

Field	Value	Description
SNMP trap	yes | no; default: **no**	Turns SNMP trap on or off.
Host/IP	host | ip; default: **none**	Host to transfer SNMP traffic to.
Port	integer [0..65535]; default: **162**	Port number of the trap's host.
Community	Public | Private; default: **Public**	SNMP Community is an ID that allows access to a router's SNMP data.

List of traps

NAME	DESCRIPTION
Signal strength trap	A message will be sent when the mobile signal strength drops below specified value.
Connection type trap	A message will be sent when connection type changes, e.g. GSM changes to WCDMA.
Digital input trap	A message will be sent when digital input state will change to a specified one.
Digital output trap	A message will be sent when digital output state will change to a specified one.
Digital isolated input trap	A message will be sent when digital isolated input state will change to a specified one.
Analog input trap	A message will be sent when input voltage changes, e.g. voltage is *Higher* than 6V.
Digital relay output trap	A message will be sent when digital relay output state will change to a specified one.
