Summary

On Teltonika Networks devices a **Hotspot** is a service that provides authentication, authorization and accounting for a network. This chapter is an overview of the Hotspot section for TRB500 devices.

Note: Hotspot is additional software that can be installed from the **System** → [Package Manager](#) page.

General

Hotspot Instances

The **Hotspot Instances** section displays the main parameters of your Hotspot. By default, a Hotspot instance does not exist on the device. To create a new instance and begin configuration:

- 1. select an 'Interface';
- 2. click the 'Add' button;

After this, a new Hotspot configuration window will appear.

General Settings

The **General Settings** window is where most of the Hotspot configuration takes place. Look to the sub-sections below for information on configuration fields found in the General Settings sections.

General

| Field | Value | Description |
|--|--|---|
| Configuration profile | Cloud4wi Default Hotspotsystems Purple portal; default: Default | Pre-configures Hotspot settings according to the selected service provider. |
| Enable | off on; default: on | Turns the Hotspot instance on or off. |
| Hotspot Network | ip/netmask; default: 192.168.3.0/24 | IP address and subnet of the Hotspot network. |
| IP Address | ip; default: 192.168.3.254 | Defines the IP address of your Hotspot router in network. |
| Authentication mode | Local users Radius MAC authentication Single sign-on SMS OTP; default: Local users | Authentication mode defines how users will connect to the Hotspot. |
| Local users: Allow signup | off on ; default: off | Allows users to sign up to hotspot via landing page. |
| Local users: Expiration time | integer; default: 0 | User credential expiration time. Applies to users who signed up via landing page. |
| Local users: Users group | user group; default: default | The user group to which users signed up via landing page should be assigned to. |
| Radius: Enable MAC authentication | off on; default: off | Enable MAC address authentication. |

| | | |
|--|--|---|
| MAC authentication: Require password | off on ; default: off | Enables password requirement for MAC authentication. |
| MAC authentication: MAC auth password | string; default: none | Password for MAC authentication. |
| MAC authentication / Single sign-on/ SMS OTP: User group | select; default: default | Specifies the group of dynamically created users. |
| SMS OTP: Allow password duplicates | off on; default: off | Allows more than one user to login with a same password. |
| SMS OTP: Expiration time | unsigned integer; default: 0 | User expiration time in sec (0 means unlimited). |
| Landing Page | Internal External ; default: Internal | Location of the landing page. |
| UAM Port | integer; default: 3990 | Port to bind for authenticating clients. |
| Password encoding | off on; default: none | Password encoding with the challenge. |
| Landing page address | url; default: none | External landing page address (http://www.example.com). |
| UAM Secret | string; default: none | Shared secret between uamserver and hotspot. |
| Success page | Success Page Original URL Custom ; default: Success page | Location to return to after successful authentication. |
| Custom | url; default: none | Address must contain protocol (http://www.example.com). |

Advanced

✖

| Field | Value | Description |
|-----------------------|---|--|
| Additional interfaces | Available interfaces; default: none | Choose additional the interfaces you want to attach to this hotspot instance. |
| Enable MAC blocking | off on; default: off | Blocks access to MAC addresses that have reached set amount of failed login attempts. |
| Logout address | ip; default: 1.0.0.0 | IP address to instantly logout a client accessing it. |
| Protocol | HTTP HTTPS ; default: HTTP | Protocol to be used for landing page. |
| Enable TOS | off on; default: off | Enables Terms of Service (ToS) requirement. Client device will be able to access the Internet only after agreeing ToS. |
| Trial access | off on ; default: off | Enables trial internet access for a specific group. |
| Group | User group; default: default | Specifies the group of trial users. |
| Subdomain | string; default: none | Combined with Domain to make a DNS alias for the Hotspot IP address. |
| Domain | string; default: none | Combined with Subdomain to make a DNS alias for the Hotspot IP address. |

| | | |
|--------------------------------------|--|--|
| HTTPS to landing page redirect | off on ; default: off | Redirect initial pre-landing page HTTPS requests to hotspot landing page. |
| Certificate files from device | off on; default: off | Specified whether to upload key & certificate files from computer or to use files generated on this device via the <i>System → Administration → Certificates</i> page. |
| SSL key file | key file; default: none | Upload/select SSL key. |
| SSL certificate file | certificate file; default: none | Upload/select SSL certificate. |
| Primary DNS server | ip; default: 8.8.8.8 | Additional DNS servers that are to be used by the Hotspot. |
| Secondary DNS server | ip; default: 8.8.4.4 | Additional DNS servers that are to be used by the Hotspot. |

Radius

Radius authentication mode uses an external RADIUS server, to which you have to provide an address to, instead of using the router's Local Authentication. If you are using Local authentication, this section is not visible.

| Field | Value | Description |
|---------------------|--|---|
| RADIUS server #1 | ip; default: none | The IP address of the RADIUS server #1 that is to be used for Authenticating your wireless clients. |
| RADIUS server #2 | ip; default: none | The IP address of the RADIUS server #2 that is to be used for Authenticating your wireless clients. |
| Authentication port | integer [0..65535]; default: 1812 | RADIUS server authentication port. |
| Accounting port | integer [0..65535]; default: 1813 | RADIUS server accounting port. |
| NAS identifier | string; default: none | NAS-Identifier is one of the basic RADIUS attributes. |
| Radius secret key | string; default: none | The secret key is a password used for authentication with the RADIUS server. |
| Swap octets | off on; default: off | Swaps the meaning of input octets and output as it relates to RADIUS attributes. |
| Location name | string; default: none | Custom location name for your Hotspot. |
| Location ID | string; default: none | Custom location ID for your Hotspot. |

Walled Garden

You can add a list of addresses that users connected to the Hotspot will be able to reach without any authentication. By default this list is empty. Simply write addresses into the Address List.

Format of address is **website.com** (does not include <https://www>).

| Field | Value | Description |
|--------------|--|--|
| Address list | domain names (one record per line); default: none | List of addresses the client can access without first authenticating. One record per line. See placeholder for accepted formats. |

URL Parameters

The **URL parameters** section becomes visible when **Landing page** is selected as **External** in [General settings](#) section.

| Field | Value | Description |
|------------|--|---|
| UAM IP | string; default: none | The IP Address of the Captive Portal gateway. |
| UAM port | string; default: none | The port on which the Captive Portal will serve web content. |
| Called | string; default: none | The MAC address of the IP Address of the Captive Portal gateway. |
| MAC | string; default: none | The MAC address of the client trying to gain Internet access. |
| IP | ip default: none | The IP Address of the client trying to gain Internet access. |
| NAS id | string; default: none | An identification for the Captive Portal used in the RADIUS request. |
| Session id | string; default: none | The unique identifier for session. |
| User url | string; default: none | The URL which the user tried to access before he were redirected to the Captive Portal's URL's pages. |
| Challenge | string; default: none | A challenge that should be used together with the user's password to create an encrypted phrase used to log on. |
| Custom 1 | string; default: none | Add custom name and custom value which will be displayed in url parameters. |
| - | SSID Hostname FW version --Custom--; default: SSID | - |
| Custom 2 | string; default: none | Add custom name and custom value which will be displayed in url parameters. |
| - | SSID Hostname FW version --Custom--; default: SSID | - |

User Scripts

In this section you can add custom **Scripts** that will be executed after a session is authorized in the **Session up** section, after session has moved from authorized state to unauthorized in the **Session down** section and after a new user has been signed up in the **User signup** section.

| Field | Value | Description |
|--------------|--------------------------------------|--|
| Session up | bash script; default: none | Script executed after a session is authorized. Executed with the environment variables (Please refer to the wiki). |
| Session down | bash script; default: none | Script executed after a session has moved from authorized state to unauthorized. Executed with the environment variables (Please refer to the wiki). |
| User signup | bash script; default: none | Script executed after a new user has been created during signup process. Executed with the environment variables (Please refer to the wiki). |

Local Users

The **Local Users** section is used to create and manage users that can connect to the Hotspot. The elements comprising the Local Users page are explained in the list and figure below.

1. Entering a Username, Password and clicking the 'Add' button creates a new user.
2. The 'Group' dropdown menu assigns a user to another group.
3. The 'Edit' button lets you change a user's password or assign the user to another group.
4. The 'Delete[X]' button deletes a user.

Landing Page

This section is used to define how your Hotspot's **Landing Page** will look like to connecting users.

General Settings

General Settings section lets you choose the authentication protocol and theme that will be used in the Landing Page. You can download more themes using the [Package Manager](#)

Themes

The **Themes** section displays all available Landing Page themes. In order to download a theme, click the 'Download' button, in order to edit a theme, click the 'Edit' button next to it.

Images

The **Images** section allows you to upload custom images to different objects.

Style Settings

Pressing 'Edit' button next to style settings lets you edit how your landing page will look visually using CSS syntax.

View Settings

In **View Settings** you can access and modify default templates for various parts of landing page and edit their HTML code.

Custom Theme

To use custom theme you can download default theme and edit it's content. Then use 'Browse' button to upload it.

User Groups

User Groups provides the possibility to set different connection limits for different users. A group called 'default' is already created and does not have any limitations set by default. You can

1. create a new group by entering a custom Name and clicking 'Add'
2. or configure the existing rule by clicking the 'Edit' button next to it.

A group's settings page will look similar to this:

| Field | Value | Description |
|--------------------|-------------------------------|--|
| Idle timeout | integer; default: none | A timeout in seconds after which idle users are automatically disconnected from the Hotspot. (0 means unlimited.) |
| Time limit | integer; default: none | Disables hotspot user after time limit in sec is reached. (0, meaning unlimited) |
| Download bandwidth | integer; default: none | Maximum download bandwidth that the users assigned to this template can achieve. Bandwidth can be specified in Mbit/s. |
| Upload bandwidth | integer; default: none | Maximum upload bandwidth that the users assigned to this template can achieve. Bandwidth can be specified in Mbit/s. |

| | | |
|----------------|---|---|
| Download limit | integer; default: none | A received data limit that the users assigned to this template can reach. After the data limit is reached, the user will lose data connection. Download limit is specified in MB. |
| Upload limit | integer; default: none | A sent data limit that the users assigned to this template can reach. After the data limit is reached, the user will lose data connection. Upload limit is specified in MB. |
| Warning | integer; default: none | Send an SMS warning to hotspot user after warning value of download or upload data in MB is reached. Only works with SMS OTP authentication. |
| Period | Month Week Day; default: Month | The beginning of the period during which the restriction specified in this section will apply. After the period is over, all specified limits are reset. |
| Start day | integer [1..31] Monday..Sunday integer [1..24]; default: 1 | Choices changes depending on what 'Period' was chosen. Specifies which day of the month, week or hour of the day the limits will be reset. |

User Management

The **User sessions** tab displays the status and session statistics of currently logged in users. You can also "kick" (deauthenticate) a user by clicking the 'Logout' button next to it.

The **Registered Hotspot Users** tab displays the data of unique users that have registered to the hotspot before.
