Talk:RUT240

Hello I have a problem with RUT240 local network I have 2 systems in local. On laptop an one machine. With other routers i have. I take the control locally of this machine without problems But with RUT240 nothing. The machine looks to see it is in the same network. But the laptop don't manage to communicate.

I tested to connect both in ethernet (wan is changed for lan) so i was using both ethernet ports. I tested with laptop in ethernet and the machine in wifi. The reverse. Nothing work.

The machine work on 9000 and 9050 ports. I tried to open those ports in lan source and destination. I tried to open every ports 1-10000 I don't know if i did correctly and don't know if it is the appropriate solution.

Can you help me please to solve this and stop the firewall blocking me Thanks
