## Talk:RUT950

Hi, I've got a RUT950 router where I have a problem with login from outside. I'm using a dyndns service with fixed hostname and dynamic public IP. Sometimes I can reach the router, and sometimes not. After some days the router gets offline, and I have to restart the router to get the connection back up. I've tried the ping reboot function, but problem remains.

Can you help me?

Regards Espen Sørensen
