

Template:Networking trb2xx manual ethernet port leds

Ethernet port LEDs

The Ethernet port LEDs are located on the gateway front panel, in both upper corners on Ethernet port:

[[File:{{{file_eth_led}}}|{{{size_eth}}}px]]

Since {{{name}}} gateway supports Fast ethernet speeds, **green** LED is not used and only **orange** LED represents information about ethernet connection activity:

Action	Description
LED turned ON	Operating as a 10/100 Mbps connection
LED turned OFF	No link established
LED blinking	Connection established and there is activity (data being transferred)
LED blinking fast simultaneously with connection and signal strength LEDs	Router is in the bootloader menu state*

* The **bootloader menu** is a special router state from which certain upgrades can be performed. For more information on the bootloader menu, click [here](#)
