Template:Networking tsf manual ethernet port leds

Ethernet port

There is one **LEDs** located at the top-left of each **Ethernet port** (top-right green port is unused).

[[File:Networking_{{{name}}}_manual_leds_ethernet_leds.png|500px]]

They provide information on the current states of the Ethernet ports. Each port has one LED:

- **Orange** - 10/100 Mbps connection

Below is an explanation on the behaviours of orange LEDs.

State	Description
LED on	A data connection on the port is operational (cable plugged in, end device visible, no data is being transferred).
LED off	No data connection on the port is operational (no cable, bad cable or end device not visible for some other reason (such as damaged network card)).
LED blinking	Connection established and data is being transferred over this port.
