Template:Rms manual rms create resource code

Create resource code

Alternatively, to transfer resources you can use resource codes (previously known as *credit codes*).

To create a code for desired resource, navigate to [Companies](#) page under Administration section.

1. There, next to **+ADD** button click on arrow to view more actions.
2. Click on **Create code**.
   Note: *creating code from **Companies** page will use resources of company to which the current user belongs. If you desire to create code on **specific sub-company** and use its resources instead, do the action from [Company's details page](#) on desired company.*
3. In Create new code action window select:
   1. Type of resource you will put in the new code (Credit / Management pack / Connect data pack).
   2. Amount of resources you will move.
   3. Optionally, you can type in comment.
   4. Click on **CREATE** button to execute the action.

To view the newly created code, navigate to Codes tab on your [RMS company's details](#) page.
