## Summary

This chapter is a guide on configuring **vpngate.com** provider VPN instance on RUT routers.

No registration required.

## Step 1: Download the OpenVPN Configuration File

**=Select VPN server=ABCD@1234**

---

Open your internet browser and type [www.vpnbook.net](http://www.vpnbook.net) in the browser's URL bar. Press **OpenVPN** and select server

✘

## Step 2: Certificates

### Certificate creation

---

Create three files in your chosen directory for certificates and key:

- ca.crt - Certificate authority
- client.crt - Client certificate

- client.key - Client Key

## Create certificates

---

Extract and open one of the downloaded VPN configuration files and copy/paste the certificates and key to your empty files.

Save changes.

## Step 3: Router configuration

Now we need to open our RUT homepage. You can access the website by entering **192.168.1.1** in your internet browser's URL bar.

Open VPN configuration panel by clicking **Services → VPN**

## VPN instance creation

---

Type in your **VPN** configuration name and click **Add new**

Click the **Edit** button to edit your VPN instance configuration

## Configuration settings

---

Check the **Enable** box

Set port, encryption, remote host/IP address and authentication algorithm from the VPN configuration file you downloaded. (example below)

**Upload** your certificates:

- Upload ca.crt as Certificate authority
- Upload client.crt as Client certificate
- Upload client.key as Client key

Click **Save**.

## Step 4: Try your VPN

Wait up to 5 minutes from the time you saved the changes.

Press **Status** → **Network**.

Press **OpenVPN** and check VPN status.

*if IP address is missing something is wrong with router configuration*

Open your internet browser and visit website <http://whatismyipaddress.com> to check location that should have changed.
