

How to reach a router's command line interface (CLI) from RMS?

[Main Page](#) > [IoT Platforms](#) > [RMS](#) > [RMS FAQ](#) > **How to reach a router's command line interface (CLI) from RMS?**

RMS provides the possibility to connect to a router's **command line interface (CLI)** from any remote location. The only prerequisites being that the router must be registered to RMS and have an active Internet connection.

1. To reach the CLI of any router, log in to RMS and check the Device table.
2. On the left side of the table, you will see the "Action" column which contains a few icons next to each device.
3. Click the  **CLI** icon next to the device whose CLI you would like to reach.

To reach **CLI** click on the  **CLI** icon.

Type in the login name **root**, press **Enter**, type in the router's admin password and press **Enter** again. You should be greeted with a message such as this:
