Introduction

This article provides step-by-step instructions on how to set up an additional WAN connection by connecting a USB modem to the USB port of a RUT955 router.

Prerequisites

What you need:

- A [RUT955](#) router running FW version RUT9XX_R_00.03.906 or newer ([FW downloads](#))
- A USB modem. List of supported USB modems:
 - Huawei MS2131i-8

Instructions

1. Connect the modem to your RUT955 router's USB port.
2. Enter the router's WebUI and go to the **Network** → **Mobile** → [USB Modem](#) page. Configure the modem in accordance with your needs:

3. Once you have finished configuring the modem settings, go to the **Network** → [WAN](#) page and set the Modem to act as the Main WAN or WAN Failover connection and Save the settings:

4. Once all of the above is complete, you will have successfully configured an additional Internet connection via the USB modem
