## **RUT230 Custom Scripts**

## **Summary**

The **User Scripts** function allows users to write their own shell scripts that will be executed during the device's booting process. This page is an overview of the User Scripts function in RUT230 devices.

## **Startup Script**

The **Startup Script** section shows the contents of the /etc/rc.local file and allows the user to edit it. This scripts written in this file are executed at the end of the device's boot cycle. You can also execute the script via a <u>command line interface</u> with the following command:

sh /etc/rc.local

The figure below is an example of the Startup Script management section:
