

Talk:RUT230

Hi, We have a problem with "cgi output". The response is waiting for the "time"-parameter. We need the response immediately then we send the command because the time is 10 minutes and our server timeout waiting for response.

A very good solution will be that the router send the response immediately and a new request after the time in the parameter if it is more than 30 seconds.

Can you help us? /Goran at Tickoff AB
