Talk:RUT9xx old Bootloaders

Hello we are using Hubba X4 Gobal Due router onboard our Ship. It had RUT9XX_R_00.01.907 firmware , byild date 2015-12-16, kernel version 3.10.36. When trying to update the firmware it occured that size of update is bigger than size of the flash memory. No the system is in Safe Mode and there is no way we can get the internet onboard going. Could you please help in this matter ASAP, we are in the port now and we need this communication.
