Teltonika-Networks Operating System - RutOS

[Main Page](#) > [FAQ](#) > [Other Topics](#) > **Teltonika-Networks Operating System - RutOS**

❌

RutOS is a unified operating system based on OpenWrt used by all Teltonika-Networks devices. This system enables our customers to have an excellent user experience using Teltonika routers since all the devices are easy to use due to an intuitive interface. This system enables our clients to cut their cost on engineer training while implementing new devices. Moreover, it empowers to be flexible when migrating between different devices and platforms. Lastly, the system is open source, therefore, every client can change and adopt RutOS in order to get the most out of each and every Teltonika-Networks device.
