

Teltonika wiki>About

WE ARE TELTONIKA NETWORKS

We create [IoT connectivity equipment](#) for the IoT world of tomorrow. With over 25 years of market expertise, we bring our vision and experience to create products of seamless connectivity, simple integration, and remote management capabilities for industrial solutions worldwide.

FROM ENGINEERS, TO ENGINEERS

As people who create networking products, we understand the needs and frustrations that naturally come from working in this industry. Both this Wiki and our portfolio of routers, gateways, Ethernet switches, access points, modems, and our Remote Management System (RMS) are made for the benefit of engineers like you—to make your work simpler and more effective by giving you the tools you need.

Feel free to contribute and help improve these materials—you don't even need to log in! Your edits will be submitted for review and, if approved, will be made visible to all other users. At Teltonika, our community comes first!
