

User:Ksweber

Hi, I am Klaus.

I use a RUT850 in my car since February 2022. There it provides

1. internet access for passengers via regular WLAN access point functionality
2. as a WLAN station it additionally connects to the CarPlay WLAN access point in the car and offers the iPhone connected to the Carplay network a route to the internet.

My contribution to this wiki is an outcome of my configuration solution with the above use case "[WLAN internet connectivity for Carplay network](#)": see [WIFI WAN connection used as LAN](#).
